### Report of the Medical Officer of Health for the Year 1957

---

TO THE CHAIRMAN AND MEMBERS OF THE EAST GRINSTEAD URBAN DISTRICT COUNCIL

I have the honour to submit my Annual Report for the year 1957.

The Report is prepared as indicated in Ministry of Health Circular No. 1/58 dated 13th January, 1958.

The Crude Death Rate is 14.92 as compared with 14.91 for 1956.

The Standardised Death Rate is 10.44 as compared with 11.5 for England and Wales. The Standardised Death Rate is obtained by the application of a "comparability factor" making allowance for the age and sex distribution of the district for comparison with England and Wales.

The Infantile Mortality Rate is 9.39 which compared with 22.6 for the previous year (there were four deaths in 1956 and two in 1957).

The Birth Rate is 16.72 compared with 13.87 in 1956.

The Standardised Birth Rate is also 16.72 compared with 16.1 for England and Wales.

There were no deaths amongst children under two years of age from enteritis or from maternal causes.

There were no deaths from Scarlet Fever, Typhoid Fever, Diphtheria, Whooping Cough or Measles.

For the twelfth year in succession no case of diphtheria was notified.

No cases of food poisoning were notified during the year.

#### **Diphtheria Immunisation.**

The immunisation rate of all children in the district up to fifteen years of age is 87.25%; of the children attending school it is 98.38%.

#### **Smallpox Vaccination.**

The numbers of vaccinations carried out at Clinics or reported by General Practitioners during the year were: under 1 year 180; 1 to 4 years 3; 5 to 14 years 3; 15 years and over 7; making a total of 193.

The numbers of re-vaccinations were: under 1 year nil; 1 to 4 years 7; 5 to 14 years 15; 15 years and over 66; making a total of 88.

JOHN PETRIE,  
*Medical Officer of Health.*

## LABORATORY SERVICES

The services of the Public Health Laboratory at the Royal Sussex County Hospital, Brighton (Telephone: Brighton 23506) are available to this Department, and to Medical Practitioners in the district for the investigation of infectious disease.

The Laboratory is in a position to accept work such as the bacteriological and biological examination of milk, water, ice-cream foods and pathological specimens. Laboratory investigations of outbreaks of communicable disease, including the detection and elimination of carriers and other reservoirs of infection, are also carried out.

Containers may be obtained from the Laboratory or from this Department and specimens may be sent to the Laboratory *via* the Southdown Bus Company. Collections are made at the Brighton terminus at 2.30 p.m. and 4.30 p.m. (except on Sundays; on Saturdays only one collection is made at 12.30 p.m.).

Specimens for the Bacteriologist may be left at the Public Health Department, East Court, before 1 p.m., and will be placed on a bus in time to reach Brighton for the 4.30 p.m. collection.

The Laboratory is open to receive urgent specimens between 10 a.m. and 12 noon on Sundays, and in cases of extreme urgency during non-working hours, the Director of the Public Health Laboratory, Dr. J. E. Jameson, may be telephoned at Brighton 56960.

The following prophylactics are held at the Laboratory for issue free of charge to Medical Practitioners :

Vaccine Lymph.

Adult serum for measles prophylaxis.

Other types of vaccines, anti-toxins, and serums are not held, but information regarding them may be obtained from the Director.

## WATER SUPPLY

Water for the greater part of East Grinstead is supplied by the South Eastern Gas Board. A few houses on the northern boundary at Felbridge are supplied by the East Surrey Water Company.

The South Eastern Gas Board have deep wells at Hackenden and Forest Row, and an additional supply is obtained from the reservoir of the Weir Wood Water Board.

The raw water is aerated, subjected to sedimentation, mechanical filtration, automatic superchlorination, and finally before going into supply, to de-chlorination to give a free residual of 0.1 p.p.m., of chlorine. A consistently safe and palatable water supply is thus assured.

Samples of water from each supply are regularly submitted to the Royal Institute of Public Health and Hygiene by the South Eastern Gas Board for chemical and bacteriological examination.

The reports on all samples submitted during the year have indicated that the quality of the water supply to the area has been of a high standard both chemically and bacteriologically.

It was not necessary to restrict the supply at any time throughout the year.

Approximately 4,276 dwelling houses have a piped water supply.

It is estimated that 12 premises are supplied by piped estate supplies and private wells.

## **RODENT CONTROL**

The Council employ one full-time Rodent Officer on Pest Destruction.

During the year 48 complaints were received. 2,372 visits under the Prevention of Damage by Pests Act, 1949, were made and 80 infestations treated.

Regular inspections have been made at the Eden Vale, Shovelstrode Lane and Imberhorne Lane refuse tips, housing estates and other Council properties.

Infestation of 32 premises was found as a result of systematic surveys which are made throughout the district.

A 10% test of sewers was completed in March 1957 to the satisfaction of the Inspector from the Ministry of Agriculture, Fisheries and Food.

A nominal charge for rodent destruction is made to householders. Business premises are charged with the actual cost of treatment in accordance with the agreement between the Council and the Ministry of Agriculture, Fisheries and Food. No charge is made for subsequent inspection to ensure that the premises remain free from rats.

---

## **REFUSE COLLECTION AND DISPOSAL**

This work is carried out by the Engineer and Surveyor's Department.

House refuse is collected weekly. Trade refuse is collected at the request of the trader concerned and charges at cost plus 15% are made.

Refuse is disposed of by tipping at Imberhorne Lane. Before being covered newly-tipped refuse is treated with gammexane insecticide to prevent breeding of flies.

Frequent inspections of the tips have been made to ascertain possible nuisance caused by rodents and flies.
